

Brainstorm & Idea Prioritization

Date	29/09/2026
Team ID	-
Project Name	BlogNest - AI-Powered Blog Management Backend
Maximum Marks	-

Step 1: Team Gathering, Collaboration and Select the Problem Statement

The team gathered around the case study of **Priya**, a content creator who manages multiple blogs and struggles to organize posts, schedule publications, manage categories and tags, and track reader engagement. The selected problem statement: *How might we give content teams a single, secure backend that manages the full blog lifecycle and uses AI to speed up writing?*

Step 2: Brainstorm, Idea Listing and Grouping

Group	Ideas listed
Content management	CRUD blog engine; draft / pending approval / scheduled / published lifecycle; media path registration; categories and tags for discoverability
Access control	JWT stateless authentication; role matrix (Admin, Editor, Author, Reader); bcrypt password hashing
Engagement	Public post listing; comments with moderation flags (approved, pending, spam); likes counter; per-post performance data
AI assistance	AI blog generation from a theme (/api/ai/generate-blog); article summarization (/api/ai/summarize); AI FAQ assistance
Platform safety	Input sanitization (XSS, NoSQL injection); request validation; rate limiting; centralized error handling; structured logging

Step 3: Idea Prioritization

Idea	Impact	Effort	Priority
Registration, login and JWT with RBAC	High	Medium	1 - Must have
Blog CRUD with status lifecycle	High	Medium	1 - Must have
AI blog generation and summarization	High	Medium	1 - Must have
Comments and moderation	Medium	Low	2 - Should have
Categories and tags	Medium	Low	2 - Should have
Input sanitization, rate limiting, logging	High	Low	2 - Should have
Post performance analytics	Medium	High	3 - Could have
Scheduled publishing	Medium	High	3 - Could have
