

Problem - Solution Fit

Date	29/09/2026
Team ID	-
Project Name	BlogNest - AI-Powered Blog Management Backend
Maximum Marks	-

Purpose: confirm that BlogNest actually solves the problem content teams face, and understand the existing situation in order to improve it.

Canvas block	BlogNest
1. Customer segment(s)	Bloggers, content creators, editorial teams and readers who publish or consume blog content
2. Jobs to be done / problems	Manage drafts, categories and tags; approve and publish posts; moderate comments; upload media; measure post performance
3. Triggers to act	Growing number of blogs and drafts; missed publish dates; heavy comment moderation; pressure to publish quality content quickly
4. Emotions (before / after)	Before: overwhelmed, frustrated, uncertain. After: in control, confident, productive
5. Available solutions	Manual spreadsheets, general CMS platforms, separate AI writing tools with no workflow or role control
6. Customer constraints	Limited time, need for secure access, budget, need for a simple API that works with any frontend
7. Root cause of the problem	Content workflow, permissions, media, engagement data and AI help live in disconnected tools
8. Behaviour	Creators draft in one tool, track in another, and moderate comments manually; editors approve over messages
9. Channels of behaviour	Online: REST API consumed by web or mobile frontends, tested via Postman. Offline: team discussions and manual reviews
10. Solution	A centralized, secure Node.js/Express REST API with JWT, role-based access, blog lifecycle, comment moderation, and Gemini-powered blog generation and summarization
